

CNET: HTML5 Sites

When **CNET** needed a fast and flexible way to deliver Rich Media Ads to their advertisers, they turned to **EachScape** to create HTML5 mobile sites.

EachScape created a flexible HTML5 site that could be accessed by clicking on banner ads within their apps, and could be configured to satisfy the needs of their customers with varying requirements.

CNET also needed a simple way to manage content for the HTML5 sites and uses **EachScape Cloud Collection**, our cloud-based CMS, to quickly create ad microsities for their latest clients.

EachScape is a next generation SaaS platform to build and manage highly custom native apps for iOS, Android and HTML5. We offer a scalable solution to create and manage complete mobile portfolios, including integrated analytics, CMS and push notifications.

EachScape's clients' brands are among the most recognized in the world.

Let us show you how. Contact us for a demo today!
